Empowering Students with Cutting-Edge Skills

Our Vision: To offer excellent academic courses that provide a quality learning experience and positive education experience to all students. We strive to foster an atmosphere of aspiration and determination to succeed in our students, which is at the soul of our vision. To achieve this, we are committed to providing top-quality teaching and learning facilities that enable our students to realize their full potential and become lifelong learners. We believe that by providing a supportive and engaging learning environment, we can help our students achieve their goals and become successful leaders in their chosen fields.

Founded in 2018, 21 Academy is committed to providing high-quality education to students from all backgrounds and walks of life. We offer a range of awards, undergraduate, graduate and post graduate programs in various fields of study, including business, education, law, human resources management, and more. To date all our study programmes have been locally designed and accredited in order to prepare our students for the specifics of the local and European markets.

Our institution is committed to fostering a diverse and inclusive community, where students can learn from one another and engage in meaningful dialogue and debate. We promote this particularly among those students who only join us for our online courses.

Our academic staff are professionals in their respective fields and are dedicated to providing students with the skills and knowledge they need to succeed in their chosen careers. They deliver the training on a part time basis while at the same time gathering more experience practicing their profession This helps to keep the training deliverables continuously updated.

21 Academy also offers custom made inhouse training programmes for businesses as well as delivers training programmes at its own premises in Naxxar and online.

Students undertaking their studies at 21 Academy have recognised the cost-effectiveness of each programme and the flexibility as well as the expediency through which they are delivered.

Occupational Health and Safety

Modules

- Health & Safety Essentials
- Health & Safety Legislation
- First Aid at the Workplace
- Construction Hazards and Risk Control
- Risk Management in Practice
- Managing Physical Hazards
- Managing Occupational Health Risks
- Managing Chemical Biological and Psychological Risks
- Risk Assessment Evaluation and Control

- MQF Level 5
- 60 ECTS
- 300 contact hours
- 9 modules

Entry Requirements

- Applicants must be in possession of at least a matriculation certification (MQF Level 4) or A Level equivalent.
- OR
- Three years work experience in the field of health and safety
- OR
- In accordance with the Academy's Recognition of Prior Learning Policy

Methods of Assessment

Different modules will have different assessment methods which will all have a weighting towards the module's final score. These will include a combination of:

- **Self-Assessment**
- **Presentations**
- **Quiz**
- **Assignments**
- **Reflective Notes**

Pass mark will be 50% of the total weighted score of the different assessment methods.

The Undergraduate Diploma in Occupational Health and Safety provides a professional introductory program of study. The overall goal of the study programme is to equip students with the knowledge and skills necessary to identify workplace hazards, assess risks, and develop effective strategies for preventing accidents, injuries, and illnesses in various industries and occupations.

It may also be a pathway for the higher-level degrees such as Bachelor in Occupational Health and Safety. This Occupational Health and Safety programme has been developed in conjunction with industry needs to address the complex nature of occupational health and safety at the workplace. The specialised knowledge and skills developed throughout the course will allow participants to confidently address the complex nature of workplace issues.

It also addresses the knowledge vacuum to those individuals who are assigned to undertake the role of a supervisor or the equivalent in the construction industry.

Whou shoudl attend?

- Those who have recently completed higher secondary school and are looking to enter the workforce in a health and safety-related role.
- Individuals looking to transition into a career in occupational health and safety.
- Human Resources personnel who are often responsible for ensuring compliance with occupational health and safety regulations within an organisation.
- Managers and supervisors who play a critical role in overseeing workplace safety and ensuring that employees adhere to safety protocols.
- Construction site managers
- Forepersons working on construction projects
- H&S Construction Project Supervisors
- Anyone with a responsibility in managing construction work safely

This Diploma is recognised by the Occupational Health and Safety Authority

Health & Safety Essentials

ECTS 5 **Contact hours 60**

Method of Assessment: Self-Assessment, Assignment & Presentation

This module equips students with the knowledge and skills to establish and manage effective health and safety practices within an organisation. The module emphasises the development of responsibility, autonomy, and the ability to create policies, provide guidance, propose measures, and stay informed about relevant legislation and best practices.

It aims to provide participants with an opportunity to have an understanding of health and safety management and its integration into organisational management systems. The nature of organisations and how management functions, such as effective teamwork and leadership can be directed towards the recognition and control of risk is considered.

Throughout the module, learners will engage in practical exercises, case studies, and discussions to enhance their understanding and application of health and safety management principles within an organisational context.

Health & Safety Legislation

ECTS 3 **Contact hours 15**

Method of Assessment: Reflective Notes & Presentation

The study unit empowers participants with the knowledge and skills to interpret, implement, and evaluate health and safety practices within organisations. The module focuses on fostering responsibility, autonomy, and collaboration to ensure compliance with both Maltese and international legislation, develop policies and procedures, conduct audits and inspections, engage stakeholders, and enhance overall health and safety performance.

Participants will develop collaboration skills to engage relevant stakeholders in promoting a safe and healthy work environment. They will explore strategies for effective communication, consultation, and cooperation with employees, management, unions, and external parties. Learners will understand the importance of fostering a culture of shared responsibility and actively involving stakeholders in health and safety initiatives.

First Aid at the Workplace

ECTS 3 **Contact hours 15**

Method of Assessment: **Reflective Notes & Presentation**

The module equips learners with the knowledge and skills necessary to respond effectively to workplace injuries, medical emergencies, and other critical situations. The module focuses on fostering responsibility, autonomy, and effective communication in designing emergency protocols, applying first aid techniques, organising medical resources, and providing emotional support.

Participants will develop strategies for establishing efficient communication channels and implementing effective teamwork protocols to optimize emergency response. They will acquire the skills to formulate appropriate first aid techniques and procedures to respond to various workplace injuries and medical emergencies.

The module also focuses on setting up basic life support and cardiopulmonary resuscitation (CPR) effectively.

Construction Hazards and Risk Control

ECTS 12 **Contact hours 60**

Method of Assessment: **Self-Assessment, Assignment, and Presentation**

Thisl module provides learners with the knowledge and skills necessary to identify, assess, and manage hazards in construction sites. The module emphasizes the development of responsibility and autonomy in recognising potential hazards, coordinating risk assessments, implementing control measures, designing safety procedures, and promoting a safety culture among workers and management.

The module focuses on generating a safety culture and raising awareness among workers and management regarding construction hazards and risk control. Learners will explore strategies for promoting a positive safety culture, including training programs, safety meetings, and hazard reporting systems. They will develop effective communication and leadership skills to foster a proactive safety mindset within construction teams.

Risk Management in Practice

ECTS 8 **Contact hours 40**

Method of Assessment: Assignment, Quiz, and Presentation

The module equips learners with the knowledge and skills to assess, evaluate, and manage safety hazards associated with the workplace, work equipment, and working practices. The module focuses on fostering responsibility, autonomy, and critical thinking in formulating risk assessment strategies and implementing effective control measures.

Participants will gain an understanding of the systematic approach to risk assessment, including hazard identification, risk evaluation, and control options. They will develop the ability to analyse workplace hazards and formulate appropriate recommendations to minimize risks. Various factors, such as ventilation, personal protective equipment, and work organisation, including psychological risks, that influence the level of exposure will be examined.

Participants will gain proficiency in using risk assessment tools and interpreting the results to make informed decisions.

Managing Physical Hazards

ECTS 6 **Contact hours 30**

Method of Assessment: Quiz & Assignment

This module is designed to equip learners with the essential competences, knowledge, and skills necessary to effectively identify, assess, and manage physical hazards in various environments.

The module focuses on providing students with a comprehensive understanding of potential risks and strategies to minimize or eliminate them. It covers a wide range of physical hazards such as noise, vibration, temperature, and radiation.

Managing Occupational Health Risks

ECTS 4 Contact hours 20

Method of Assessment: Assignment

The module provides students with an in-depth understanding of the long-term health impacts associated with occupational exposures. The module explores various elements that can have gradual effects on the body over time, rather than causing immediate accidents.

Students will gain insights into the importance of monitoring and controlling workplace conditions to safeguard the health of workers.

They will develop an understanding of the mechanisms by which various hazardous substances can affect specific organs and systems. Furthermore, the module covers Epidemiology, providing students with the knowledge and skills to assess and analyse the occurrence and distribution of occupational diseases and illnesses.

Managing Chemical Biological and Psychological Risks

ECTS 4 Contact hours 20

Method of Assessment: Assignment

The module provides students with a comprehensive understanding of the basic properties of various hazardous elements found in the workplace. The module covers three major categories of workplace hazards, namely chemicals, biological hazards, and psychological risks.

In the section on chemicals, students will explore the fundamental properties of gases, vapors, and aerosols commonly encountered in different occupational settings. The module also delves into the realm of biological hazards, focusing on the wide range of potential infections that individuals may come across in the workplace. Students will explore the various factors that contribute to psychological risks, such as stress, harassment, and workplace violence.

Risk Assessment Evaluation and Control

ECTS 8 **Contact hours 40**

Method of Assessment: **Assignment, Quiz, and Presentation**

This core module aims to provide learners with a comprehensive understanding of risk assessment methodologies, evaluation techniques, and control measures. Through theoretical knowledge and practical exercises, learners will develop the competencies, knowledge, and skills necessary to effectively assess, evaluate, and mitigate risks across various domains.

Additionally, it will provide students with the detailed concept of Risk assessment, understand the difference between qualitative and quantitative methods.

Overall Learning Outcomes

The learners will be able to:

a) Interpret the nature of organisations and management theories in the context of the management and promotion of health and safety at work

b) Identify the different types of workplace hazards, such as physical, chemical, biological, ergonomic, and psychosocial hazards.

c) Draw audits and perform inspections

d) Apply control measures to identified job hazards

e) Design in carrying out risk assessments

f) Carry out risk assessment for construction activities

g) Identify causes of accidents and recommend preventive measures

h) Formulate the elements of a health and safety management system and understand their role in monitoring health and safety standards on site.

i) Set up management in the undertakings related to Health and Safety of an organistion (After two years of full-time experience be eligible for the OHSA's Competent person register)

j) Interpret the context of H&S law and where it should be applied

k) Generate job hazards and apply control measures

l) Manage in workplace H&S Committees

m) Manage hazards and apply risk control measures including working at height, demolition, excavation, piling, fire, mechanical & electrical, material handling and occupational health hazards

n) Write the safety and health duties and responsibilities of a Construction Supervisor.

o) Formulate safety planning and site organisation procedures.

p) Prepare relevant health and safety legislation for construction site job hazards and apply control measures for a construction site including; working at height, demolition, excavation, piling, fire, mechanical and electrical, materials handling, and occupational health hazards.

q) Plan out risk assessments for construction activities.

r) Prepare simple investigations and prepare incident reports
